# Workflow for Embedding Specimen Metadata into Field Images

**Image captured** → **Data recorded in notebook** → **Images downloaded and renamed**

**Specimens processed** ← **Image data uploaded into database** (MySQL) ← **Image data transcribed into csv**

**Specimen data uploaded to database** (MySQL) → **Specimen and image data linked and exported in form of script** (SQL → BAT) → **Script run on image files to add Darwin Core metadata to XMP fields** (EXIF TOOL)
